- Tools, Parts, Batteries

WHAT IS A MICRODOT?™

Microdots are polyester particles 0.5mm in diameter and are literally the size of a pin head.

Once mixed in a special adhesive containing UV they can be applied by hand or sprayed onto assets.

Using a special magnifier the unique information contained on each microdot can be viewed.

DataDot Cellphone Scope

- Can be fitted on any mobile phone with a camera
- Enables user to view microdot information
